

TITAN UNLOADER

The Titan Unloader is designed as a high-pressure accessory for the Titan V3 Packer. It is designed to withstand the same severe operating conditions and loads as the packer. This unloader provides a means of equalizing tubing and annulus pressures as well as a by-pass to allow fluid to pass through the mandrel of the packer while running the drill string in and out of the well. Circulation can be established to spot fluids to the packer or circulate debris from the hole.

Special Features

- Standard J-slot locks in the open and closed positions
- Standard J-slot is right-hand close, right-hand open
- Additional J-slot arrangements available
- Peek backup rings on all o-rings
